DETAILED ACTION

Claim Objections

1. The objections to claims 3 and 8 are rendered moot in view of the cancellation of the claims.

Specification

2. The substitute specification filed 10-1-03 has not been entered because it does not conform to 37 CFR 1.125(b) and (c). The substitute specification should not include claims and a marked up version of the substitute specification showing all the changes (including the matter being added to and the matter being deleted from) to the specification of record was not received.

Claim Rejections - 35 USC § 112

3. The rejections of claims 1-5 and 8-9 under 35 U.S.C. 112, second paragraph, are most in view of the cancellation of the claims.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/976,296 Page 3

Art Unit: 1773

5. The rejection of claims 1, 3-5, and 9 under 35 U.S.C. 103(a) as being unpatentable over

Tamari et al. (EP 0673021) in view of Usuki (US 6525908) is withdrawn in view of the

cancellation of claims 1-9.

6. Claims 10, 12-14, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Tamari et al. (EP 0673021) in view of Usuki (US 6525908).

Tamari et al. disclose a magnetic recording medium containing a Co-containing spinel

iron oxide (i.e., maghemite) disposed on top of a substrate and having a layer of NiO in between

(see abstract). In one example, the coercive force of a medium with a Co containing spinel iron

oxide film having a thickness of 40.8 nm is 2000 Oe.

The reference is silent with respect to the particular values of Ra and Rmax of the

magnetic surface.

Usuki discloses a magnetic recording medium having a defined values of Ra and Rmax

such that high electromagnetic transfer characteristics are ensured (col. 7, lines 38-41).

It would have been obvious to one of ordinary skill in the art at the time of invention to

optimize the roughness parameters noted above for the magnetic layer taught by Tamari et al. in

order to provide a medium having high electromagnetic transfer characteristics.

Allowable Subject Matter

7. Claims 11 is objected to as being dependent upon a rejected base claim, but would be

allowable if rewritten in independent form including all of the limitations of the base claim and

any intervening claims.

Application/Control Number: 09/976,296 Page 4

Art Unit: 1773

8. Claims 11 and 15 are allowable over the closest prior art to Tamari et al. and Usuki. The prior art fails to teach or suggest the claimed surface electrical resistance value and saturation magnetization value of the recording medium taught therein. The prior art fails to teach or suggest a motivation to optimize these parameters in the structure taught by the combination of Tamari et al in view Usuki.

Response to Arguments

9. Applicant's arguments filed 10/1/03 have been fully considered but they are not persuasive.

Applicant argues that Tamari et al. and Usuki are not "reasonably pertinent to the problem solved by applicants." However, it is the Examiner's contention that both references are from the same field of endeavor, that is, magnetic recording media. As such, both fall in the category of analogous art according to the criteria set forth in *In re Clay*. According to *In re Clay*, it is only if the prior art reference is not within the same field of endeavor as the inventor's that one must consider the particular problem which the prior art addressed.

Applicant further argues that Tamari et al. do not meet the claim limitation directed to the thickness of the "Co-containing spinel-based iron oxide thin film." Applicant argues that Tamari et al. teach a multilayered structure in which a single unit having a thickness of 408Å was laminated to form a structure having a thickness of 244.8 nm which is outside of the claimed thickness range. However, the reference meets all limitations of the claims for a single unit of

Application/Control Number: 09/976,296

Art Unit: 1773

٠,

the multilayered structure and the present claims do not in any way exclude the presence of additional unrecited layers.

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Holly Rickman whose telephone number is (703) 305-2642. The examiner can normally be reached on Monday-Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul J. Thibodeau can be reached on (703) 308-2367. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Art Unit: 1773
